by Sophie Green    Updated on 2021-10-30 / Update for    Fix Android Anyone else APN settings greyed out after Android 10 upgrade? Can't mobile data?" APN or Access Point Name settings are for advanced level mobile users which requires a stable internet connection to work along. It can be defined as the essential information needed to connect your phone to the internet that contains your android device address that can be used to have the internet connection. At times, the APN settings on your android device may get locked or greyed, causing it to not get modified or changed. Through this post, we will discuss all the work-around to modify APN settings with ease! Sometimes, APN settings on your device for a particular carrier may be "locked" such that they are "grayed out" and can't be modified. This is often an indication that they have been set by your currently connected carrier and that you shouldn't need to modify them. Below are the common APN setting problems on Android. Not able to edit the existing access point names. Not able to add the new APN -- the + sign or the "add" option is missing. Not able to save the APN settings. APN settings not available for the current user profile. When this happens, it's a clear cut indication that the settings have been set by the connection carrier which cannot be changed or modified. But, in few cases, these settings can be changed by following some easy steps. In some cases, these settings can be changed by following some easy steps. The below steps will guide you to resolve the concern leading to unable to change APN settings! 1. Fix unable to change APN settings by resetting to default Resetting to the default will help undo the settings that your carrier has made on your device and will return to the original settings set by the manufacturer. The below steps will guide you to change the APN settings manually: Navigate to your phone Settings and select the "Wireless and Network" option. From Wireless and Network settings, click on the Mobile Networks option. Now, scroll down the page a little and select the "Access Point Name or APN" option. From here, click on the three dots on the upper right side of your device's screen and select the Reset to default option. Note: The APN settings are there in the SIM. In case, you are unable to find it, consider getting in touch with your telecom operator to hello you out. The operator will make you fill all the fields related to your SIM and once it's done, click on Save to set up the APN on your android device. 2. Activate Airplane mode on your phone to change APN settings Sometimes, your carrier customized settings are restored while resetting the APN. To prevent the carrier from auto-completing the APN settings, airplane mode works out. Go to your device Settings. Select Airplane or Flight mode from there, by activating or enabling it using a slide button. 3. Remove the SIM card to change APN settings In case the Airplane mode doesn't work for you to change the APN settings then consider removing your SIM and then follow the below steps: Navigate to APN settings and change them accordingly. Insert the SIM and restart your android device. Doing so should be able to fix the concern you are facing. 4. Restart Your Phone While Connecting to Wi-Fi to change APN settings You can also simply restart your phone to fix unable to change APN settings Android issue. Follow the below steps to restart your phone and then change the APN settings: Connect your phone to your Wi-Fi. When trying to connect to the network, restart your mobile phone. When your phone restarts, it will be automatically connected to the previous network. After this, go to APN settings to check whether you are not able to edit or view. 5. Restore Your Android Phone and Start Afresh to change APN settings If you are not able to change the APN settings on your android phone, the last option is to use an Android repair software to repair Android OS. We recommend using Tenorshare ReiBoot for Android as it is a professional and user-friendly Android repair tool that is capable of fixing numerous Android issues such as Android black screen and Android app crashing seamlessly, etc. Download and install this tool on your computer. Connect your android device to your computer and click on the "Repair Android System" option. Now, select "Repair Now" and then select your device information in the list. Then, after selecting the device information from the list, the firmware package will begin to download and the process will take a few minutes to finish. After a successful package download, click on "Repair Now" and wait for the entire process to get over. When you are unable to change the APN settings on your android device, you are restricted from editing existing access points, adding new APN like "+" or "Add" while not being able to save APN settings. The above-given methods will help you in changing the APN setting on your device and let you perform your tasks without worrying! To unlock your device, the only solution is to follow the Dr.Fone - Screen Unlock (Android). If you are looking to unlock the screen when the phone is locked, then this method solidly proves to bypass swipe lock Android when it is locked. It helps to resolve this issue by bypassing or removing the swipe screen without causing any loss to your data. This tool temporarily supports bypassing Android screens without data loss on Samsung and LG. As for other Android phones, all the data will disappear after unlocking with this tool. Features of this Dr.Fone software are many. It gives a solution to four lock methods: a pin, pattern, fingerprint, and password. It is user-friendly, and even a user with no technical information can also use it with no issue. This tool is only limited to remove the screen lock on Samsung and LG without losing data. Your data will still be wiped out on other Android phones after using this tool. Remove 4 Types of Android Screen Lock without Data Loss It can remove four-screen lock types - pattern, PIN, password & fingerprints. Only remove the lock screen. No data loss at all. No tech knowledge asked. Everybody can handle it. Work for Samsung Galaxy S/Note/Tab series, and LG G2, G3, G4, etc. Tips: This tool also supports unlocking other Android screens beyond Samsung and LG. However, it does not support saving all the data after unlocking, like Samsung and LG. Step 1: Initialize the Dr.Fone on the computer, and there will be many options in front of you. In that, select the "Screen Unlock." Step 2: Now, to bypass swipe lock Android, using the USB cable, connect the Android device to your computer, and it will prompt the Unlock Android Screen option. Step 3: To enable the download mode on your Android device, shut down your phone>Simultaneously, press the volume down, Home button, and Power button >Press the Volume up button. Once your device is in download mode, the recovery kit will get downloaded. Step 4: You will see the result right in front of you as Dr.Fone - Screen Unlock, recovery will bypass swipe lock Android without hampering your data. Foremost, you can now access your device without swipe up to unlock the screen. Pretty simple, right? Dr.Fone - Screen Unlock to the rescue for the issue of swipe screen to unlock. Ever been locked out of your device due to FRP lock and searched for a bypass tool without luck, well if so, read this guide to the end. Here, we will introduce to you six tested and working FRP remove tools for all android that will give you total access to your smartphone or tablet. Apart from the full introduction of the FRP unlock tools, you can also download an FRP remove tool for all Android devices here. The first option comes highly recommended, but the others work just as well. The aim is to give you ideas to help you make an informed decision before settling for an all-mobile FRP unlock tool. Tool 1: The Best FRP Bypass Tool - iMyFone LockWiper (Android) To start off our list of FRP remove tools for Android, we will start right with the best and most highly-rated FRP unlock software - iMyFone LockWiper (Android). One thing you should know is that all mobile FRP unlock tools claim to help you bypass FRP lock on your mobile device, but most will end up bricking your device. Others might work correctly, but then the procedure would be so complicated that you may end up breaking something. iMyFone LockWiper (Android) delivers in specs, user interface, simplicity, and has the highest success rate of 98%. 100,000,000+ Downloads The best FRP lock removal tool ever for your locked device. Remove Google account verification/FRP lock after factory reset without password. Permanently delete the old Google account and create a new one. The new Google account linked will not be trackable from the old account. Also works with all Android operating system versions. Download Now Download FRP tool to remove Google account lock quickly: Step 1: Launch LockWiper (Android), on the first page, click Remove Google Lock (FRP) and click Start. Step 2: On the next screen, you will be presented with some generated info about your connected device. When everything is perfect, click Next. After that, select the right device PDA, from the dropdown, set your country and mobile carrier, and then click Download. Step 3: LockWiper will then begin to download data for your device, and then hit the Start to Extract link to extract it. After unpacking it, put your device into Downloading Mode and click Start. Step 4: Next, when prompted, enter 000000 to begin to install the downloaded package on your device. After the installation is complete, enable USB debugging and OEM unlock on your device. Step 5: Following the download, click Start to Extract. Step 6: This is not really a step, because all you do here is relax and watch iMyFone LockWiper (Android) bypass the stubborn FRP lock in a matter of minutes. Download Now That's all! Easy right? After you bypass the FRP lock, you can then access your device normally and configure it with a different Google account. Need a detailed guide to complete the process? Check here! Tool 2: HushSMS FRP APK Apart from the above mentioned FRP remove tool for all Android devices that you can download and install on your PC, if you are looking for a robust FRP remove tool for all Android devices, you can opt to use HushSMS. HushSMS was originally designed for cybersecurity and sending short messages via GSM networks, but it also works perfectly for bypassing FRP lock on devices. Pros        HushSMS allows you to bypass FRP without needing a computer or an OTG cableFree to useCons        Not as user-friendly as iMyFone LockWiper (Android)Your device must be rooted to use this applicationNot verified on a lot of devices Tool 3: Pangu FRP Bypass If you want to download an FRP remove tool for all Android devices, Pangu is another superb all Android FRP unlock tool. It is also one of the more popular options, and it's known for handling the FRP bypass operation fast - you can complete the entire process in under 10 minutes. vovogajo wowahu lizaba royetimolu zedage devu.
